

Course Staff

Course Convener: Dr. Alex von Brasch, Room EE338, a.vonbrasch@unsw.edu.au
 Project Coordinator: Luke Dolan, lukedolan42@gmail.com

Consultations: The lectures and labs are the primary avenues of contact between the teaching staff and the students. The consultations are not meant to replace these, but to allow the students to raise concerns (or ask questions) they might have with the lecturer in charge, should the standard contact channels prove inadequate. Consultations with the lecturer can be arranged by email. Note that the lecturer has a full-time commitment in industry and so will not generally be available in person outside of the contact hours and consultation times. ALL email enquiries should be made from your student email address with ELEC3117 in the subject line, otherwise they may not be answered.

Keeping Informed: Announcements may be made during classes, via email (to your student email address) and/or via online learning and teaching platforms – in this course, we will use Moodle <https://moodle.telt.unsw.edu.au/login/index.php>. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

Students are strongly encouraged to post questions on these forums – the lecturer, project coordinator, and demonstrators check these forums regularly and will respond to these questions in a timely manner.

Course Summary

Contact Hours

The course consists of 2 hours of lectures and a 3-hour laboratory session each week. The laboratories begin in Week 2 with the purpose of finding a lab partner and discussing project ideas.

Lectures	Day	Time	Location
	Thursday	4pm - 6pm	Richie Theatre (Building G19)
Laboratories	Monday	12pm – 3pm	EE101
	Wednesday	9am – 12noon	EE101
	Wednesday	2pm – 5pm	EE101
	Thursday	1pm – 4pm	EE101
	Friday	9am – 12noon	EE101
	Friday	12pm – 3pm	EE101

Context and Aims

The course aims to:

- Expose students to the practical and technical challenges of serious Electrical Engineering design.
- Develop teamwork and project management skills.
- Provide a practical context for learning in other courses, so as to cement practical skills in electronic circuit design and reinforce the importance of disciplines such as control, signal processing, embedded systems, etc.
- Impart an appreciation for the broader aspects of design, including consumer needs, marketing, product economics, manufacturing, standards, intellectual property and systems thinking.
- Further develop written and oral technical communication skills

Indicative Lecture Schedule

Period	Summary of Lecture Program
Week 1	Introduction to Design
Week 2	Marketing Tools, Needs Assessment, and Requirements
Week 3	System Architectures and High Level Designs
Week 4	Microcontroller Selection
Week 5	Project Management and Economics
Week 6	Technical Communications; Issues in Electronic Components
Week 7	Issues in Electronic Circuits: Electromagnetic Compatibility and Safety
Week 8	PCB Design and Manufacturability
Week 9	Intellectual Property and Legal Considerations
Break	
Week 10	Standards and Quality Assurance

Indicative Laboratory Schedule

Period	Summary of Project Program
Week 2	Find Project Partner and Brain-storm ideas
Week 3	Discuss ideas with Tutors and Lecturers. Market Research/Needs Assessment. Project Selection Form Due.
Week 4	Requirements Generation. Concept Generation and Selection.
Week 5	High-Level System Design. Identify critical elements. Source critical components. Source Reference Designs.
Week 6	Development planning. Early prototyping. Proposal Preparation.

Week 7	Write development proposal. Planning/Prototyping. Development Proposal Due.
Week 8	Detailed Design. Prototyping/Testing.
Week 9	Functional Prototype. Refine Specifications.
Break	
Week 10	Prototype testing and refinement. PCB Design.
Week 11	Finalise Demonstration. Prepare Presentation.
Week 12	Project Seminar and Demonstration.
Week 13	Final Report Due.

Assessment

Project Development Proposal	15%
Laboratory Attendance	5%
Project Seminar and Presentation	25%
Final Report	25%
Final Exam (3 hours)	30%

Course Details

Credits

This is a 6 UoC course and the expected workload is 10–12 hours per week throughout the 13 week semester.

Relationship to Other Courses

For most students in Electrical or Telecommunications Engineering, this should be your second real design subject, the first having been ENGG1000. The subject draws heavily on skills in electronic circuit design, which you are expected to have developed through previously taken subjects. Without these, it will be difficult to complete a meaningful design. You are also expected to have developed a habit of maintaining a laboratory notebook, which you will find particularly important for this course. Through this subject, you should gain additional insight into the importance of technical courses such as control, signal processing, embedded systems and the like, although ELEC / TELE / PHTN 3117 projects do not generally depend on such knowledge.

Pre-requisites and Assumed Knowledge

The pre-requisite for this course is ELEC2133, Analogue Electronics. It is essential that you have a reasonable background in Electronic Circuits before this course is attempted. It is further assumed that students have some familiarity with microcontrollers, as would be gained from ELEC2142, Embedded System Design, or similar.

Following Courses

The course is a pre-requisite for under-taking ELEC4120, Thesis A.

The following course in the design stream is ELEC4123, Electrical Design Proficiency – this is a core, Level 4 course. For students wishing to develop further in the entrepreneurial and small-business aspects should consider ELEC4445, Entrepreneurial Engineering, offered as a fourth year technical elective.

Learning outcomes

After successful completion of this course, you should be able to:

1. Be capable of initiating, designing, and managing an electronic design project.
2. Have developed software skills with project management, circuit schematic, and PCB design software.
3. Be able to work in a small development team, write formal project reports, deliver a product development proposal, and present a technical seminar.
4. Recognise the conditions under which it is important to conduct patent searches, file patents, follow and/or contribute to standards.
5. Be able to apply knowledge of manufacturing processes, electromagnetic compatibility, safety, and other areas to the design of quality products.

This course is designed to provide the above learning outcomes which arise from targeted graduate capabilities listed in **Appendix A**. The targeted graduate capabilities broadly support the UNSW and Faculty of Engineering graduate capabilities (listed in **Appendix B**). This course also addresses the Engineers Australia (National Accreditation Body) Stage I competency standard as outlined in **Appendix C**.

Syllabus

Design Project Management: Introduction to scheduling, costing, marketing, standards, patents, quality, safety, (electronic) manufacturing methods, engineering innovation, Report Writing and Oral Presentations. Design Methodology: Systematic design procedures, design documentation. Designing for quality, manufacture, maintenance, minimum life cycle cost. Aspects of Electronic Design: Component selection, tolerances, passive component characteristics. Also EMC, Earthing, and PCB layout principles. Engineering Drawing and Graphical Communications: Projections, dimensioning and drawing interpretation. Group Project: Students are required to design and build an electrical engineering project. This process will include producing specifications, detailed design, prototype production and testing. The Design will be presented in a seminar and documented in two formal technical reports that also consider scheduling, marketing and business plans.

Teaching Strategies

Delivery Mode

The design project plays a major role in the learning process for this course, since it provides an opportunity for you to practice many of the methods which are taught in lectures. In particular, project management, electronic prototyping, properties of electronic components and many other areas of teaching in this course cannot be properly appreciated without undertaking a serious concurrent design project. Lectures also play a very important role in the learning process for this course. Lectures are designed to supply students with much valuable information to assist in their projects, while also providing a broad framework for design, including many facets which cannot be experienced properly within a student project.

Learning in this course

You are expected to attend all lectures and laboratory sessions in order to maximise learning. The design project is at the centre of the course, and it is expected that it will

require a significant amount of your time beyond the face-to-face scheduled class time (recall that the expectation for a 6 UoC course is that it would occupy 10-12 hours of student time per week). In addition to the lecture notes, you should read widely from a variety of relevant sources – the lectures cannot cover the specific technical details pertaining to your specific project, and you are expected to develop the skills to be able to research technical concepts independently. Reading additional texts will further enhance your learning experience. Group learning is also encouraged. UNSW *assumes* that self-directed study of this kind is undertaken in addition to attending face-to-face classes throughout the course.

Lectures

Lectures cover technical aspects of detailed design, as well as broader aspects of design, including marketing and economics. All material covered in lectures is examinable, not just that which directly relates to student projects. Lecture notes will be provided incrementally, to accompany the lectures. You should note carefully, that the lecture notes and lectures are not the same. By and large, the lecture notes are carefully prepared written materials, designed to be read. With some exceptions, PowerPoint slides are not lecture notes. You should realise by now that PowerPoint slides are aids, designed to accompany an oral presentation. By themselves, lecture slides have little teaching value.

Project/Laboratory Component

The project is the major component of the work in ELEC/TELE/PHTN 3117. It represents over half of the total marks for the subject. Therefore, to do well in this subject you must do well in your design project. Even more importantly, you must pass the laboratory component. Failure to do so may result in a UF (Unacceptable Fail), even if your overall final mark is greater than 50%. This project requires much more than just designing and constructing an electronic circuit. It requires the consideration of a broad range of Engineering and strategic business issues, such as target market, competition, costing, timing etc.

You are required to attend laboratory from Week 2 to Week 12. Laboratory attendance WILL be kept, and you MUST attend at least 80% of labs to pass the course.

Laboratory Exemption

There is no laboratory exemption for this course. Regardless of whether equivalent labs have been completed in previous courses, all students enrolled in this course for Semester 2, 2015 must take the labs. If, for medical reasons, (note that a valid medical certificate must be provided) you are unable to attend a lab, you need to inform either the Course Convener or the Project Coordinator.

Assessment

The assessment scheme in this course reflects the intention to assess your learning progress through the semester. Ongoing assessment occurs through the project assessment tasks – laboratory attendance, project development proposal, and the project seminar.

Project Selection

You must submit a project selection form by Friday of Week 3. The form is to be submitted on Moodle. Before making your project selection you also should select a partner, as projects are to be done in pairs. In the event that you have not been able to find a lab partner it is possible to submit an individual project selection form and a partner will be found for you. This is not recommended, however. More information on the project may be found on the course website.

Project design teams are nominally composed of only two students. Project teams of three will be considered only where otherwise unavoidable. In order to achieve project teams of two, it is typically necessary for some students to change the laboratory session in which they are enrolled. This is because project team members must all attend the same scheduled laboratory session.

Project Development Proposal

The first major group assessment for the design project is the Project Development Proposal, due by 10pm on Friday of Week 7. This is a formal engineering report, containing a description of the product and design concepts, market assessment and analysis, economic and cost estimates, and development plan. The Project Development Proposal will account for 15% of the total course marks. Further details of this assessment task, including the detailed marking scheme, will be made available closer to the date. The Report is to be submitted via Moodle, and also a printed copy is to be submitted to the School Office.

Project Seminar and Demonstration

During the laboratory sessions in Week 12, you will be asked to present your design and demonstrate a functional prototype. Each project team will be allocated 15 minutes for the seminar and demonstration – a timetable will be posted closer to the date. This assessment task accounts for 25% of the total course grade. The focus of the presentation is for you to emphasize the novelty of your design, the technical challenges and improvements required for the design to move into commercial development, and demonstrate the functional prototype. The aim of this assessment is to give students experience in communicating technical ideas.

Final Report

The final report is due by 10pm of the Friday in Week 13, submitted by Moodle along with a printed copy handed in to the School Office. The focus of the final report is on describing the detailed design and the subsequent plan for manufacturing/further development as well as the business plan. This assessment task contributes 25% of the total course grade. Further details of the final report will be provided closer to the date.

Late reports will attract a penalty of 10% of the maximum attainable mark per day late (including weekends). For example, if the report is two days late and achieves a raw mark of 87%, the final result for this report will be 80% (since this is the maximum attainable mark, given it is two days late). However, a report achieving a raw mark of 67% that is two days late will still achieve a final mark of 67%.

Final Exam

The exam in this course is a standard closed-book 3 hour written examination, comprising four compulsory questions. University approved calculators are allowed. The examination for this course focuses on the important aspects of the course curriculum that are difficult to cover through a student project – technical aspects such as electromagnetic compatibility and manufacturing limitations, as well as the important non-technical aspects of engineering design, such as patents, quality, safety, and standards. The final exam accounts 30% of the total course grade. *Please note that you must pass the final exam in order to pass the course.*

Relationship of Assessment Methods to Learning Outcomes

Course Resources

Textbooks

There are no required texts for this course. If there were one, it would be the first text from the following list of recommended books:

Reference books

- **K.T. Ulrich and S.D. Eppinger, Product Design and Development, McGraw-Hill, 2000 (2nd edition).** This book provides a good overview of the design process with a number of relevant case studies to illustrate the methods discussed. It includes sections on product costing and project management, as well as methodologies for market analysis and concept generation. This text is easy and enjoyable to read and may be purchased from the UNSW bookstore. However, it does not touch on the details of electronic design, or a number of other topics covered in the course.
- **J.E. Salt and R Rothery, Design For Electrical and Computer Engineers, John Wiley & Sons, 2002.** This book covers key aspects of design at a high level, but with quite a few examples. Strong on user needs/requirements and high level design. Covers a variety of design approaches, project management, and costing issues. This text is easy to read and may be purchased from the UNSW bookstore. However, it does not touch on the details of electronic design, or a number of other topics covered in the course.
- **P. Horowitz and W. Hill, The Art of Electronics, Cambridge University Press, 1989 (2nd edition).** This book is an excellent reference for electronic design issues that may be required to complete your project.
- **D. A. Norman, The Design of Everyday Things, Currency-Doubleday, 1990.** A very interesting read. Ever wondered why you just walked into a door, or tried to pull a sliding door? This book discusses the design of the everyday objects that we take for granted.

Students are reminded that the UNSW library is an excellent resource.

On-line resources

Moodle

For course notes, up-to-date lecture schedules and related links, the primary website for this course will be <http://moodle.telt.unsw.edu.au>. You should check the web-site regularly, especially before attending lectures.

Mailing list

Announcements concerning course information will be given in the lectures and/or on Moodle and/or via email (which will be sent to your student email address).

Other Matters

Academic Honesty and Plagiarism

Plagiarism is the unacknowledged use of other people's work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see <https://student.unsw.edu.au/plagiarism>. To find out if you understand plagiarism correctly, try this short quiz: <https://student.unsw.edu.au/plagiarism-quiz>.

Student Responsibilities and Conduct

Students are expected to be familiar with and adhere to all UNSW policies (see <https://student.unsw.edu.au/guide>), and particular attention is drawn to the following:

Workload

It is expected that you will spend at least **ten to twelve hours per week** studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and *independent, self-directed study*. In periods where you need to need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.

Attendance

Regular and punctual attendance at all classes is expected. UNSW regulations state that if students attend less than 80% of scheduled classes they may be refused final assessment.

General Conduct and Behaviour

Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.

Work Health and Safety

UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations

You must submit all assignments and attend all examinations scheduled for your course. You should seek assistance early if you suffer illness or misadventure which affects your course progress. All applications for special consideration must be **lodged online through myUNSW within 3 working days of the assessment**, not to course or school staff. For more detail, consult <https://student.unsw.edu.au/special-consideration>.

Continual Course Improvement

This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the Course and Teaching Evaluation and Improvement Process. You can also provide feedback to ELSOC who will raise your concerns at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to

provide a rich and meaningful learning experience, we have continued to evaluate and modify our delivery and assessment methods.

In response to recent student feedback, we have:

- Increased the weighting of the design project in the overall course grade, and reduced the weighting of the final exam.
- Restructured and condensed the lecture content, to make it more directly relevant to the design project.
- Introduced cash prizes for the best designs, to reward the best student design project efforts throughout the session.

Administrative Matters

On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies:

<http://www.engineering.unsw.edu.au/electrical-engineering/policies-and-procedures>

<https://my.unsw.edu.au/student/atoz/ABC.html>

Appendix A: Targeted Graduate Capabilities

Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

Appendix B: UNSW Graduate Capabilities

The course delivery methods and course content directly or indirectly addresses a number of core UNSW graduate capabilities, as follows:

- Developing digital and information literacy and lifelong learning skills through assignment work.
- Developing ethical practitioners who are collaborative and effective team workers, through group activities, seminars and tutorials.
- Developing independent, self-directed professionals who are enterprising, innovative, creative and responsive to change, through challenging design and project tasks.
- Developing citizens who can apply their discipline in other contexts, are culturally aware and environmentally responsible, through interdisciplinary tasks, seminars and group activities.

Appendix C: Engineers Australia (EA) Professional Engineer Competency Standard

	Program Intended Learning Outcomes	
PE1: Knowledge and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals	
	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing	
	PE1.3 In-depth understanding of specialist bodies of knowledge	
	PE1.4 Discernment of knowledge development and research directions	
	PE1.5 Knowledge of engineering design practice	✓
	PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice	✓
PE2: Engineering Application Ability	PE2.1 Application of established engineering methods to complex problem solving	✓
	PE2.2 Fluent application of engineering techniques, tools and resources	✓
	PE2.3 Application of systematic engineering synthesis and design processes	✓
	PE2.4 Application of systematic approaches to the conduct and management of engineering projects	✓
PE3: Professional and Personal Attributes	PE3.1 Ethical conduct and professional accountability	✓
	PE3.2 Effective oral and written communication (professional and lay domains)	✓
	PE3.3 Creative, innovative and pro-active demeanour	✓
	PE3.4 Professional use and management of information	✓
	PE3.5 Orderly management of self, and professional conduct	
	PE3.6 Effective team membership and team leadership	✓
