ELEC4622
Multimedia Signal Processing
Course Outline – Semester 2, 2016

UNSW
AUSTRALIA

Never Stand Still   Faculty of Engineering   School of Electrical Engineering and Telecommunications

Course Staff

Course Convener: Dr. Aous Naman, MSEB Room 748, aous@unsw.edu.au
Tutor: Dr. Siyuan Chen, Room G7, siyuan.chen@unsw.edu.au
Laboratory Contact: TBA

Consultations: You are encouraged to ask questions on the course material, after the lecture class times in the first instance, rather than via email. Lecturer consultation times will be advised during lectures. ALL email enquiries should be made from your student email address with ELEC4622 in the subject line, otherwise they will not be answered.

Keeping Informed: Announcements may be made during classes, via email (to your student email address) and/or via the subject website – this subject uses the School of EE&T's subjects repository at https://subjects.ee.unsw.edu.au/elec4622. Please note that you will be deemed to have received this information, so you should take careful note of all announcements.

Course Summary

Contact Hours

The course consists of 3 hours of lectures, a 1-hour tutorial, and a 3-hour laboratory session every two weeks.

(Tentative)

	Day	Time	Location	Weeks
Lectures	Mon.	4pm – 6pm	Red Centre Central Wing M032 (K-H13-M032)	Week 1-12
Tutorials	Wed.	2pm – 4pm	Quadrangle G031 (K-E15-G031)	Week 3-13 either odd or even
Test	Wed.	2pm – 3pm	Quadrangle G031 (K-E15-G031)	Week 8
Labs	Tue.	9am – 12noon	EE214 (K-G17-214)	Week 3-13 odd only
	Wed.	10am – 1pm	EE214 (K-G17-214)	Week 3-13 odd only

Context and Aims

This course provides a broad introduction to multimedia signal processing. The major emphases of the course are:

1. Extension and application of one dimensional signal processing concepts into multiple dimensions (2 dimensions for images and 3 dimensions for video);
2. Practical implementation of signal processing algorithms in software, using real programming environments (particularly C/C++) as opposed to Matlab;
3. Understanding, estimating and enhancing specific multimedia features of shape, orientation, texture, colour and motion.
4. Understanding multi-media formats and representation schemes.

Assumed Prior Knowledge
Students taking this course should have previously taken at least an introductory subject in one-dimensional signal processing, and have at least some computer programming skills.

Assessment
- Final exam: 60%
- Midterm test (taken during the pre-tutorial hour of Week 8): 10%
- Three laboratory projects (assessed in Labs in Weeks 5-13): 30% (+ possible bonus marks)

The final mark for the subject is $B + (1 - B/100) \cdot (E + Q + L)$, where B, E, Q and L are the bonus, exam, quiz and laboratory marks mentioned above.

Student learning outcomes
At the successful completion of the course the student should:
1. Be familiar with multimedia signal representations, acquisition, file formats and standards;
2. Be comfortable with Fourier transforms, power spectra, convolution and other signal processing concepts for multi-dimensional signals;
3. Be able to design filters and other algorithms to enhance and extract important features from multimedia signals;
4. Be confident in implementing multimedia signal processing algorithms in both Matlab and C/C++.

Rationale behind this course's approach to learning and teaching
- Signal processing is an important branch of Electrical Engineering, which is foundational to multimedia processing and telecommunications. The initial mathematical framework for signal processing is introduced in earlier courses in signals and systems and the third year signal processing course ELEC3104. However, many students find that they do not feel confident enough to implement real signal processing algorithms to solve practical problems. In view of this, the present professional elective has been deliberately designed to have a strong emphasis on practical implementation.
- Multimedia signal processing is highly intensive in terms of computational and memory resources. As a result, most practical work in this area involves programming in a native language (typically C or C++), sometimes in tandem with the development of dedicated hardware (FPGA's initially). In view of this, the practical aspects of this course emphasize native implementation and resource management methodologies.
- The course covers significant fundamental material of a theoretical nature. In order to provide an efficient and balanced learning experience, laboratory sessions are designed to closely follow the relevant developments in lectures. A portion of each laboratory session is used to provide practical demonstration of strategies for implementing concepts very recently taught in lectures.
- Independent thinking and problem solving are very important aspects of this course, since it is only by independently tackling a challenging problem that the student becomes confident in his/her understanding. A second portion of most laboratory sessions is devoted to the completion and interactive assessment of

multimedia processing solutions, which students must have designed in their own time, based on a thorough understanding of the lecture materials.

Course schedule (tentative)

Week	Begins	Lecture Topic(s)
1	25 July	Continuous and discrete LSI systems + review of native programming in C
2	1 Aug	Multi-dimensional filtering, memory organization and management
3	8 Aug	Imaging systems, resampling and aliasing considerations in 2 and 3 dimensions
4	15 Aug	Multidimensional Filter design
5	22 Aug	Correlation and Discrete Fourier transforms
6	29 Aug	Multi-resolution processing
7	5 Sep	Introduction to shape and morphological processing
8	12 Sep	Segmentation and texture analysis
9	19 Sep	Introduction to Colour
Mid-Session Break		
10	3 Oct	**NB: Monday is a public holiday**
11	10 Oct	Introduction to motion estimation
12	17 Oct	Motion estimation continued
13	24 Oct	Introduction to Image Compression

Course Resources

Textbooks

Prescribed:

- A complete set of typeset lecture notes for the course, written by Prof. Taubman, are available via the course website. These might be amended from time to time over the running of the course, but are nonetheless very stable. They should be treated like a textbook and read carefully as essential prescribed material for the course.

On-line resources

Course Web-site:

For all course materials, project descriptions, problem sets and so forth, the official web-site for this course is at https://subjects.ee.unsw.edu.au/elec4622.

Announcements:

Announcements concerning course information will be given in the lectures and/or via the course website. You might also be sent email with important announcements, which will be sent to your student email address.

Other Matters

Academic Honesty and Plagiarism

Plagiarism is the unacknowledged use of other people's work, including the copying of assignment works and laboratory results from other students. Plagiarism is considered a form of academic misconduct, and the University has very strict rules that include some severe penalties. For UNSW policies, penalties and information to help you avoid plagiarism, see http://www.lc.unsw.edu.au/plagiarism. To find out if you understand plagiarism correctly, try this short quiz: https://student.unsw.edu.au/plagiarism-quiz.

Student Responsibilities and Conduct

Students are expected to be familiar with and adhere to all UNSW policies (see https://my.unsw.edu.au/student/atoz/ABC.html), and particular attention is drawn to the following:

Workload

It is expected that you will spend at least **ten to twelve hours per week** studying a 6 UoC course, from Week 1 until the final assessment, including both face-to-face classes and independent, self-directed study. In periods where you need to need to complete assignments or prepare for examinations, the workload may be greater. Over-commitment has been a common source of failure for many students. You should take the required workload into account when planning how to balance study with employment and other activities.

Attendance

Regular and punctual attendance at all classes is expected. UNSW regulations state that if students attend less than 80% of scheduled classes they may be refused final assessment.

Also, based on past experience, the students who struggle most with the material in this subject are those who fail to attend all lectures.

General Conduct and Behaviour

Consideration and respect for the needs of your fellow students and teaching staff is an expectation. Conduct which unduly disrupts or interferes with a class is not acceptable and students may be asked to leave the class.

Work Health and Safety

UNSW policy requires each person to work safely and responsibly, in order to avoid personal injury and to protect the safety of others.

Special Consideration and Supplementary Examinations

You must attend all examinations scheduled for your course, including in-class tests. You must also submit all assessable laboratory projects for assessment in the designated laboratory session and week, allowing adequate time for laboratory demonstrators to mark your work. You should seek assistance early if you suffer illness or misadventure which affects your course progress. All applications for special consideration must be **lodged online through myUNSW within 3 working days of the assessment**, not to course or school staff. For more detail, consult the following URL:

https://my.unsw.edu.au/student/atoz/SpecialConsideration.html.

Continual Course Improvement

This course is under constant revision in order to improve the learning outcomes for all students. Please forward any feedback (positive or negative) on the course to the course convener or via the Course and Teaching Evaluation and Improvement Process. You can also provide feedback to ELSOC who can raise your concerns or positive feedback at student focus group meetings. As a result of previous feedback obtained for this course and in our efforts to provide a rich and meaningful learning experience, we have continued to evaluate and modify our delivery and assessment methods.

One change that was introduced this year in response to previous years' feedback has been to extend the lectures to 3 hours per week. While it might not be necessary for all 3 hours to be used in every week, this will provide sufficient opportunity for students to absorb challenging concepts. Students are strongly encouraged to ask questions during lectures, in response to which the lecturer will provide alternate perspectives on the material to clear up any misunderstandings.

Administrative Matters

On issues and procedures regarding such matters as special needs, equity and diversity, occupational health and safety, enrolment, rights, and general expectations of students, please refer to the School and UNSW policies:
http://www.engineering.unsw.edu.au/electrical-engineering/policies-and-procedures
https://my.unsw.edu.au/student/atoz/ABC.html

Appendix A: Targeted Graduate Capabilities

Electrical Engineering and Telecommunications programs are designed to address the following targeted capabilities which were developed by the school in conjunction with the requirements of professional and industry bodies:

- The ability to apply knowledge of basic science and fundamental technologies;
- The skills to communicate effectively, not only with engineers but also with the wider community;
- The capability to undertake challenging analysis and design problems and find optimal solutions;
- Expertise in decomposing a problem into its constituent parts, and in defining the scope of each part;
- A working knowledge of how to locate required information and use information resources to their maximum advantage;
- Proficiency in developing and implementing project plans, investigating alternative solutions, and critically evaluating differing strategies;
- An understanding of the social, cultural and global responsibilities of the professional engineer;
- The ability to work effectively as an individual or in a team;
- An understanding of professional and ethical responsibilities;
- The ability to engage in lifelong independent and reflective learning.

Appendix B: UNSW Graduate Capabilities

The course delivery methods and course content directly or indirectly addresses a number of core UNSW graduate capabilities, as follows:

- Developing scholars who have a deep understanding of their discipline, through lectures and solution of analytical problems in tutorials and assessed by assignments and written examinations.
- Developing rigorous analysis, critique, and reflection, and ability to apply knowledge and skills to solving problems. These will be achieved by the laboratory experiments and interactive checkpoint assessments and lab exams during the labs.
- Developing capable independent and collaborative enquiry, through a series of tutorials spanning the duration of the course.
- Developing independent, self-directed professionals who are enterprising, innovative, creative and responsive to change, through challenging design and project tasks.

Appendix C: Engineers Australia (EA) Professional Engineer Competency Standard

	Program Intended Learning Outcomes	
PE1: Knowledge and Skill Base	PE1.1 Comprehensive, theory-based understanding of underpinning fundamentals	P
	PE1.2 Conceptual understanding of underpinning maths, analysis, statistics, computing	P
	PE1.3 In-depth understanding of specialist bodies of knowledge	P
	PE1.4 Discernment of knowledge development and research directions	
	PE1.5 Knowledge of engineering design practice	P
	PE1.6 Understanding of scope, principles, norms, accountabilities of sustainable engineering practice	
PE2: Engineering Application Ability	PE2.1 Application of established engineering methods to complex problem solving	P
	PE2.2 Fluent application of engineering techniques, tools and resources	P
	PE2.3 Application of systematic engineering synthesis and design processes	
	PE2.4 Application of systematic approaches to the conduct and management of engineering projects	
PE3: Professional and Personal Attributes	PE3.1 Ethical conduct and professional accountability	
	PE3.2 Effective oral and written communication (professional and lay domains)	P
	PE3.3 Creative, innovative and pro-active demeanour	P
	PE3.4 Professional use and management of information	
	PE3.5 Orderly management of self, and professional conduct	P
	PE3.6 Effective team membership and team leadership
